

# Process for the production of prestressed glass elements

## Abstract

The invention relates to a process for the production of prestressed and/or bent glass elements.

36-23 SV  
(one paragraph)  
↩ In order to avoid an edge processing with subsequent washing, the process according to the invention is carried out as follows:  
a crude (rohe) glass plate is produced;  
the glass plate is cut to the desired size;  
the cutting-to-size is done by means of a laser;  
after the cutting-to-size the glass plate is prestressed and/or bent.
